## Introduction

For the following Data Protector components, only those combinations of Data Protector components, applications, and operating systems are supported for which the corresponding application versions and operating system versions are supported by the respective vendors.

The supported operating system “Windows Server 2008 R2” include support for all editions of “Windows Server 2008 R2” including Windows Unified Data Storage Server, where applicable.

The supported operating system “Windows Server 2012” and “Windows Server 2012 R2” includes support for all editions of “Windows Server 2012” and “Windows Server 2012 R2” including Windows Unified Data Storage Server, where applicable.

The supported operating system “Windows Server 2016” includes support for all editions of “Windows Server 2016” including “Windows Server 2016 Datacenter”, “Windows Server 2016 Standard” and “Windows Server 2016 Essentials”, where applicable. Server Core and Nano Server installations are not supported unless explicitly mentioned.

The supported operating system “Windows Server 2019” includes support for all editions of “Windows Server 2019” including “Windows Server 2019 Datacenter”, “Windows Server 2019 Standard” and “Windows Server 2019 Essentials”, where applicable. Server Core installations are not supported unless explicitly mentioned.

The supported operating system “Windows Server 2022” includes support for all editions of “Windows Server 2022” including “Windows Server 2019 Datacenter”, “Windows Server 2022 Standard” and “Windows Server 2022 Essentials”, where applicable. Server Core installations are not supported unless explicitly mentioned.

The minimum patch levels for different Windows versions and editions that are supported by Data Protector are –

Operating System	Patch Level
Windows Server 2008 R2	Windows Server 2008 R2 SP1
Windows Server 2012 R2	Windows Server 2012 R2 (with Update 2919355)
Windows 10	Windows 10 version 1507 or higher

There is no minimum patch level for other supported Windows versions.

Acronyms used within the matrix are as follows:

SUSE Linux Enterprise Server - SLES

Red Hat Enterprise Linux – RHEL

Support for the major release of a Linux distribution automatically implies the support for subsequent service packs and minor releases. For example, support for SLES 15 implies the support for SLES 15 SP1 as well. Similarly, support for RHEL 8 implies the support for RHEL 8.1 and later minor releases.

In exceptional cases, there may be restrictions based on specific service packs or minor versions. They will be explicitly marked and will override the general support statement.

All references in this support matrix document to SUSE Linux Enterprise Server (SLES) includes/implies both SLES and SLES for SAP Applications.

All references in this support matrix document to Red Hat Enterprise Linux includes/implies both Workstation and Enterprise Server also.

The library libnsl.so.1 is a prerequisite to install Data Protector on RHEL 8 systems

In the case of Data Protector components running in combination with application versions and operating system versions which are not supported by their respective vendors, support from Opentext is limited to a reasonable-endeavors basis. At any time, Opentext can decide to remove those combinations from the DP support matrix.

Updates/changes to individual fields within the Matrix will be highlighted in **RED**.

## *What's New*

### What's New

1. Support for IBM Cloud Backup Target via DPD
2. Support IBM Cloud as backup target
3. Support of SAP BRTools on AIX 7.3
4. Support of DB2 10.50 on RHEL 7, 8, 9
5. Support of Disk Agent on Debian 11
6. Support of Disk Agent on Open Enterprise Server 2023 for Linux

Table 1: Supported Operating Systems

Supported operating systems

- 1 HP-UX 11.31 is HP-UX 11i version 3.0.
- 2 NIS+ is supported in a DNS environment.
- 3 rpm and bc packages to be installed for Disk Agent installation
- 4 Push installation not possible, need to be installed locally.
- 5 rpm and bc packages to be installed for Disk Agent installation
- 6 System Extended Attributes are not supported.
- 7 Includes support for Veritas Cross-Platform Data Sharing (CDS) disk.
- 8 The supported File system is NTFS. Supported backups are Full and Incremental
- 9 Supports StoreOnce software version 4.3 and earlier (CloudBank support from 3.18). For information on the StoreOnce Backup systems and features supported by this StoreOnce software version, see the *BURA Compatibility Matrix* available at [www.hpe.com/storage/BURACompatibility](http://www.hpe.com/storage/BURACompatibility).
- 10 StoreOnce system Catalyst version 3.16.x and later releases support replication over Fibre Channel (FC).
- 11 Backup to the Data Protector StoreOnce Software store is not supported.
- 12 Support for StoreOnce Catalyst version 4.3 and earlier over Fibre Channel (FC) with AIX platform requires to have dedicated ports for every StoreOnce node. For more information, see StoreOnce documentation.
- 13 Supported for DDOS versions 6.1 or later.
- 14 In addition to Data Domain Boost functionality, CIFS, NFS and VTL capabilities can be used with Data Protector. DDOS versions 6.1 or later are required for these additional capabilities.
- 15 Data Domain Boost devices configured on AIX using the Fibre Channel (FC) protocol supports only one Data Protector connection per SAN path or Data Domain end point. Due to this, AIX gateways using the Fibre Channel interface automatically get their 'Max. Number of Parallel connections per Gateway' parameter set to 1. Operations such as consolidation and replication need multiple connections per operation and will not succeed with this configuration. If additional SAN paths are added, then the AIX server's gateway settings should be modified to allow these operations to succeed.
- 16 Supports all NAS and SAN devices using CFS and NFS shares, and SAN devices using the local FS mount.
- 17 Device on Microsoft Azure StoreSimple is supported via Smart Cache device.
- 18 A Smart Cache device is not supported on a virtual node in a clustered environment.
- 19 H3C system hosted Catalyst stores version 3.16.x supports replication over Fibre Channel (FC).
- 20 Supports H3C software version 3.16.x, 3.15.x and 3.14.x. For information on the H3C Backup systems and features supported by this H3C software version, see the *BURA Compatibility Matrix* available at [www.hpe.com/storage/BURACompatibility](http://www.hpe.com/storage/BURACompatibility).
- 21 Support for H3C Catalyst version 3.16.x, 3.15.x and 3.14.x over Fibre Channel (FC) with AIX platform requires to have dedicated ports for every H3C node. For more information, see H3C documentation.
- 22 Supported targets must comply with Amazon Signature Version 4 requirements.
- 23 Reporting server can't be installed on Data Protector Cell Manager / Installation server / Client. It needs to be installed on a separate server
- 24 Cloud devices AWS S3 Glacier and Deep Archive Glacier can be used only for Data Protector File system, MSSQL, and MS Exchange integration backups
- 25 OpenVMS 8.4 releases from both HPE and VSI are supported
- 26 Support provided using client library v7.2.0.5
- 27 Supports both Local and Cluster NSS volumes

- 1 This a scripted solution, available from the ITOM marketplace (<https://marketplace.microfocus.com/>)
- 2 Availability Group configuration is supported with Microsoft SQL Server.
- 3 SharePoint Granular Recovery Extension is also supported. SharePoint 2016 & 2019 GRE with MS SQL AG is not supported.
- 4 Data Protector uses the official SAP backup and restore API (BR\*Tools), which is available only in conjunction with Oracle database. Therefore, Data Protector support only depends on the SAP BR\*Tools version (as supported by SAP in combination with various SAP kernels) and not on the SAP kernel version.
- 5 Microsoft Exchange Server DAG configured without a Cluster Administrator Access Point is supported only with Round Robin DNS mapping of the DAG name to all the node Ips
- 6 Single/Multiple Container and Multitenant Database Container are supported.
- 7 For MS SQL integration fast direct mode backup, Data Protector client based AES encryption is not supported.
- 8 Backup & Recovery of Container and Pluggable Databases (CDB & PDB) are supported.
- 9 Microsoft Exchange Server Granular Recovery Extension is also supported.
- 10 Backup and restore of single mailbox, folder, and DAG are supported only through MS Exchange Granular Recovery Extension.
- 11 Data Protector can backup and restore SQL Server databases encrypted with Transparent Data Encryption. IMPORTANT NOTE: It is the user's responsibility that the exact combination of encryption keys / certificates are used for backup and for restore. If encryption keys / certificates change between the time of backup and restore, the Data Protector restore will not work, unless all needed keys / certificates were copied and restored manually as described in <http://msdn.microsoft.com/en-us/library/bb964742.aspx> and supported through Microsoft. This process is complex and could be error prone. The key / certificate handling process is manual and not integrated into Data Protector and is therefore not supported by Opentext in case it is not correctly applied by the user.
- 12 Microsoft SQL Server 2014 and 2016 (StandAlone and Always On Availability Group) is supported for Microsoft SharePoint 2013 and Microsoft SQL Server 2016 (StandAlone) is supported for Microsoft SharePoint 2016 and Microsoft SharePoint 2019

- 1 Procedures for installing and configuring Data Protector on Serviceguard with Linux are available in the *Data Protector Help*. Zero Downtime Backup with SMIS Agent is not supported.
- 2 Includes support for Cell Manager on 'Majority Node Cluster'.
- 3 With HPE Serviceguard A.11.20.20 on Linux the CONFIGURATION backup needs to be excluded from the backup specification. BMDR is not supported.
- 4 StoreOnceSoftware Agent is not supported in cluster environment
- 5 Importing a Reporting Server in a cell controlled by Cell Manager running on Serviceguard is not supported
- 6 Exporting a Cell Manager from a MoM server running on Serviceguard is not supported. The client cell manager needs to be manually reconfigured
- 7 For specific information about Veritas Infoscale's minor-minor versions and the minor versions/support packs of related operating systems, please refer to Veritas documentation.

- 1 Raw disk backup is supported.
- 2 Raw disk backup is not supported.
- 3 XFS is supported on RHEL 7, RHEL 8, SLES 12, 15 and CentOS 7, 8
- 4 SLES 12 is not supported.
- 5 Only ext3, ext4 and XFS are supported on SLES for POWER 12 (little endian mode)

Table 11: ACL support

ACL support <sup>1</sup>	
Operating system	File system
Windows Server 2008 R2	NTFS
Windows 10	NTFS
Windows Server 2012	NTFS

Windows Server 2016	NTFS
Windows Server 2019	NTFS
HP-UX	HFS, VxFS <sup>2</sup>
OpenVMS	ODS-2, ODS-5
Solaris	UFS, VxFS (3.5), ZFS
Linux	ext3, ext4, SFS/LustreFS, XFS <sup>3</sup>

1 The basic and extended ACL limits are based on the kernel or file system limits in the respective operating systems.

2 For HP-UX 11i v3 maximum supported ACLs are 1024.

3 Supported on RHEL 7, CentOS 7 and Oracle Linux 7
